

REGISTER OR CREATE A USER

Of course we need a user if we are going to demonstrate token exchange.

1. Raksha.io creates demo user in two ways:
2. Create a Demo User tab:
 - a. In this you give full name of the demo user.
 - b. Email and,
 - c. Unique id for the user.

This will create a user with unique id in database.

3. Generate Random User tab:

This will create a random user with :

 - a. Full name
 - b. Email
 - c. Unique id

In both the cases the required password is the same as unique id of the demo user.

And don't worry, none of this data that is being stored in our database persists for more than 24 hours.
